# Revision of volume 

## Remember: Volume $=$ length $\times$ breadth $\times$ heigh $\dagger$

For example: $2 \mathrm{~cm} \times 2 \mathrm{~cm} \times 2 \mathrm{~cm}=8 \mathrm{~cm}^{3}$ (8 cubic centimetres)
Now work out the volumes below from the measurements given:
(Make sure you know your long multiplication before you start or you will get in a pickle!)
Note: These cubes are not drawn to scale

1 cm

26 mm

How did you do? $\qquad$ out of 12
